    <div class="collapse-content">
      <p>
        Donating plasma is similar to giving blood. A needle is
placed into a
        vein in your arm. Plasma is collected through a process call
plasmapheresis and is conducted in cycles that may take up to an hour.
        Whole blood is drawn. The plasma is separated from the red
blood cells
        and other cellular components. These are returned to your
body with
        sterile saline solution to help the body replace the
plasma removed from
        the whole blood.
      </p>
    </div>
